1. THE ENGLISH LANGUAGE CURRICULUM

1.1. THE BASIC APPROACH AND SPECIFIC AIMS OF THE ENGLISH LANGUAGE CURRICULUM

The Ultimate Goal of the English Language Curriculum

The fundamental goal and target of *the English Language Curriculum of the Century of Türkiye* Education Model is to enable and empower learners to acquire competence in the use of English language so that they can communicate effectively, competently, confidently, authentically, and naturally in all Communities of Practice (CoPs) and contexts that require the use of English, by supporting them according to their needs, ages, levels, interests, styles and aptitudes.

In this perspective, the aims and objectives of *the English Language Curriculum* are to support learners in acquiring and using all the knowledge and skills effectively and successfully so as to express themselves and understand others accurately and appropriately in all social and cultural contexts that require the use of English. In this way, it aims to support learners in successful use of English as a tool, medium, and means to make positive and progressive contributions to life in their own society, to life in the world, and to life in the future.

The Position of English for Türkiye

Spoken by billions of people around the world and used in science, education, the arts, the environment, health, tourism, business, etc., English covers a large geography as a mother tongue, second-administrative/ official language and foreign language. Therefore, it is considered to be the most common language in the world in terms of the number of individuals who speak it, the third most common language in terms of the number of its native speakers, and the most widespread language being used in a geography covering almost 90 countries and regions. This situation facilitates ease of communication at international level.

The global status and role of English are going a significant change. Once regarded and viewed as culturally dominant language, English now serves as an international medium that can help countries to convey their unique circumstances, cultures, and lived experiences from their own socio-cultural perspectives. In *the English Language Curriculum*, the term "foreign language" is preferred for the English language. This term is based on the three concentric "Language Circles/Circle Model" which summarises the use of English around the world. According to this model, the "Inner Circle", includes countries such as the United Kingdom and the United States of America, where English is used as a "mother tongue/first language/ native language". They are known as the counties that set the standard criteria for the English language, and as countries where people learn and use it as a "second language". These countries are home to various people and communities whose first language is not English. The "Outer Circle" are former British colonies where English is used as a "second/official/administrative language". The "Expanding Circle" countries where English is learnt and used as a "foreign language" and it is not the native language of the learners and users in these countries. According to this classification, Türkiye is in the "Expanding Circle" and is a country where English is taught as a "foreign language".

The Attributes that Constitute the Unique Character of the English Language Curriculum

There are several attributes which give *the English Language Curriculum* its unique character as described below.

The Focus on the Aspects and Factors of Language Learning

The learners' learning types, resulting from their cognitive, emotional, physical, social and learning culture aspects, and also factors of learning such as "age, aptitude, learning styles, motivation level, and personality", were taken into account in each dimension of *the English Language Curriculum* which includes "field skills", "learning outcomes", "learning-teaching experiences and practices", and "differentiated learning practices". In the Years 9-12 English Language Curriculum, the "four field skills and three supportive skills", "learning outcomes", and "learning-teaching experiences and practices" were designed and developed according to an "inductive and discovery (consciousness raising)-based" approach.

Alignment of the English Language Curriculum with the Common European Framework of Reference for Languages (CEFR)

The English Language Curriculum was aligned with the Common European Framework of Reference for Languages (CEFR) by comparing and matching the curriculum's content and learning outcomes with the CEFR descriptors. The alignment process took into account the target main and sub-themes, vocabulary, language structures, and social language content, in line with course hours, the socio-cultural context, and the aim of preparing for the future of foreign language education in Türkiye.

CEFR level A1 has been adapted as A1.1, A1.2, A1.3 in Years 2, 3 and 4 for Primary Education. CEFR level A2 has been adapted as A2.1, A2.2, A2.3, A2.4 in Years 5, 6, 7, and 8 for Lower Secondary Education. CEFR Level B1 has been adapted as B1.1, B1.2, B1.3, B1.4 in Years 9, 10, 11, and 12 for Upper Secondary Education. *The English Language Curriculum* for the Multilingual Foreign Language Programme includes CEFR Levels A2+B1 in Year 5. CEFR Level B2 has been adapted as B2.1, B2.2, B2.3 levels in Years 6, 7 and 8 for Lower Secondary Education. The Upper Secondary School Preparatory Programme has been adapted to A2+ B1 levels. CEFR Level B2 has been adapted as B2.1, B2.2, B2.3, B2.4 levels in Years 9, 10, 11, and 12 for Upper Secondary Education after Preparatory Programme.

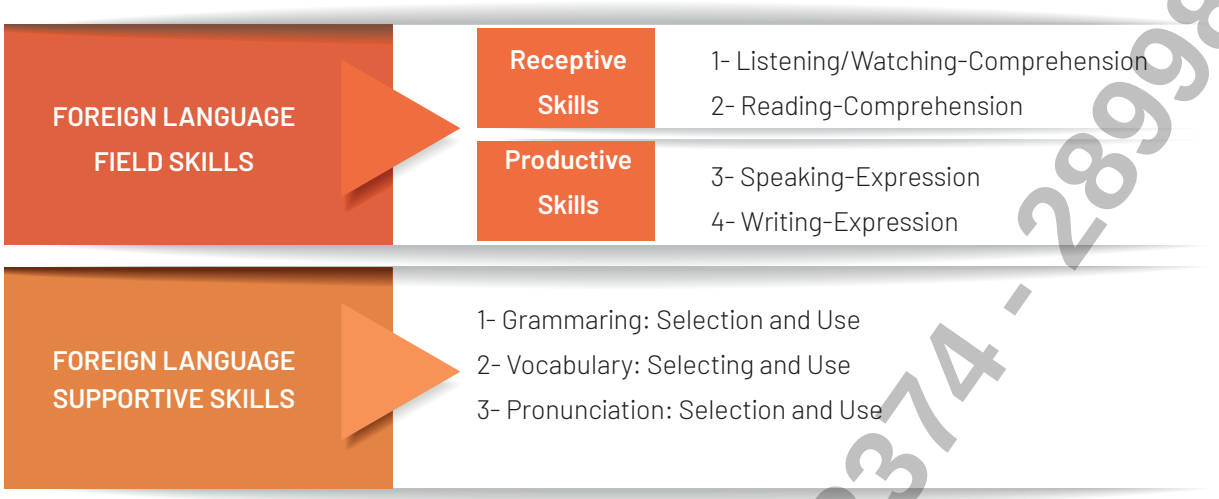

Four Field Skills and Three Supportive Skills in the English Language Curriculum

The English Language Curriculum is based on four field language skills (listening/watching-comprehension, reading-comprehension, speaking-expression, writing-expression) and additionally three supportive language skills (grammaring: selection-use, vocabulary: selection-use, and pronunciation: selection-use). Most of the time, "grammar knowledge, vocabulary knowledge, and knowledge of phonological aspects (pronunciation)" have been accepted as content knowledge in the language skills literature because they are based on the "recognition" stage of the receptive language skills. However, the "selection and use stages" of these skills should be clearly defined, and it should also be emphasised that they relate to the production stage of language. Otherwise, this gap in the literature may lead to confusion and misunderstandings. Once target grammatical items, target vocabulary and phonological aspects have been receptively recognised and identified in context as part of linguistic competence, they need to be selected and used accurately, appropriately, and efficiently in the interaction or communication phases involved in acquiring productive skills. This always happens in the natural flow of language practice however has not been precisely and openly named and defined in the foreign language literature. In *the English Language Curriculum*, the position, place, and application of these skills are clearly named, defined, and described to be consciously used in practise. *The English Language Curriculum* emphasises their importance without changing the status and importance of four field language skills recognising that all those field skills and these supportive skills have an interdependent, reciprocal, and effective relationship for language acquisition, learning, and development.

Terminology for Language Skills

When referring to language skills, the listening skill is described and used as "listening/watching-comprehension (meaning making) skill" rather than simply "listening"; while the reading skill is described as "reading-comprehension (meaning making) skill" rather than simply "reading" as receptive skills. Similarly, the writing skill is described as "writing-expression skill" instead of just "writing" and speaking skill is described as "speaking-expression skill" instead of just "speaking" as productive skills. The selection and use of grammar, vocabulary and pronunciation as supportive skills are described as "grammaring: selection-use skill, vocabulary: selection-use skill, and pronunciation: selection-use skill" in *the English Language Curriculum*.

9983274 - 28998327

Infographic: Field Skills and Supportive Skills

Reducing the Number of Themes

The English Language Curriculum has been simplified by considering the number of the weekly lessons by reducing the number of themes. It is organised in such a way so as to confirm that the themes are covered in greater depth and that all the skills activities are implemented effectively by allocating sufficient time. In addition, "consolidation, differentiation, and reflection" activities are integrated into this thematic structure. Since the number of themes has been reduced, the content of each theme might appear dense, however, this is due to the revisional and consolidating nature of the whole programme. Even though there are fewer themes and they may seem dense, they actually include less content compared to previous programmes.

Simultaneous and Common Revision Programme

In *the English Language Curriculum*, a four or three-week revision programme at the beginning of each academic year has been planned and designed for all years and levels. This revision programme has been prepared by merging eight themes in each year into two themes to be taught at the beginning of the year. Lesson materials are to be designed for this situation for the revision of the previous level before each new level in the programme. Thus it is aimed to regulate all levels of English by providing that they are revised simultaneously and with the same content in each level in every part of our country. There is also an orientation programme for one or two weeks at the beginning of the school year to be applied in all schools nationwide.

The Unique Thematic Model

The thematic sequence of *the English Language Curriculum* is based on eight main themes covering eight major concepts of life in all years and at all levels. Then, each main theme is divided into sub-themes which cover the main concepts in more detail and in smaller units. The sub-themes of the main themes are organised in a structure that complements each other but gradually deepens and becomes more comprehensive as years and levels progress. However, sub-topics change across all years and levels and are not the same in any year or level. In this way, the aim is to cover all life-related subjects and concepts throughout learners' language education and to equip them with the ability to understand, express and communicate their knowledge, thoughts, and feelings in English.

Vocabulary Sequence and Distribution

In *the English Language Curriculum*, the lexical items belonging to each sub-theme are carefully clustered and arranged according to the specific sub-theme content and the sequence of the programmes from A1 to B2. A vocabulary target has been set for each programme and these targets have been carefully arranged to be implemented both in terms of international standards and in terms of the originality and uniqueness of *the English Language Curriculum* prepared for the Turkish context. For the selection and distribution of the vocabulary, the frequency lists and categories from English corpora in dictionaries, as well as the

28998323 74 - 28998323 74 - 28998323 74 - 28998323

content produced by leading publishers and international exams, have been reviewed, analysed, and studied. Vocabulary clusters have been listed according to each sub-theme in the programme. These clusters have been examined multiple times discreetly, and word lists have been created for the entire English Language Curriculum.

Background Grammar

The English Language Curriculum adopts a contextual and continuous approach to grammar learning that previously learnt structures are reused in the context of new themes. A revision programme, implemented at the beginning of each academic year, is designed to reuse all grammatical knowledge from earlier years by recalling and consolidating them in context. In addition to this, it provides opportunities for students to encounter and reuse earlier content, supporting the acquisition of new target structures. Rather than reteaching these prior elements explicitly, they are embedded naturally within the context of some theme, functioning as supportive features alongside new grammatical targets as context and meaning makers. New or previously learned, grammar is not taught through isolated or direct instruction, instead, students are encouraged to understand and internalise grammar through meaningful use and contextual exposure by exploring and discovering their functions, meaning, and use.

Integration of Idiomatic Everyday Social Language Expressions

The aim of including "idiomatic social language expressions" used in real-life situations in *the English Language Curriculum* is to build a connection, appropriate to the students' age, between the language learned in the classroom and the language used in real life. The goal of using everyday idiomatic social language expressions in every theme and year of *the English Language Curriculum* is to add "currency (up-to-dateness), relevance, fluency, authenticity (realness), and meaningfulness" to the language. In this way, it is intended to develop students' ability to use the language in different social contexts, to understand and learn about different socio-cultural uses of language, to communicate with speakers of the language through these different socio-cultural uses, to develop respect for diverse socio-cultural uses, to activate emotional and social intelligence during language use, and to use the foreign language in its natural form. The aim is for students to enrich, internalise, and use the foreign language they are learning more naturally.

Differentiated Learning

Differentiated Learning is one of fundamental components of *the English Language Curriculum* of the Century of Türkiye Education Model. In *the English Language Curriculum*, differentiation activities which are held as expanding and supporting activities have been designed by taking the main activities in "learning-teaching experiences" section as central. They are designed by considering the diverse needs of learners to provide a fair and equal learning opportunities to all learners in harmony with their pace and capacity. The design and modification of differentiated activities has been organised in terms of their content and process. Expectations for the end products have been varied since learners' performance could be different. The environment of learning has also been considered to provide a physically and socially convenient and comfortable milieu for learners. Activities have been carefully graded to achieve the provision of effective and appropriate techniques for a variety of learners with diverse needs.

Integration of Technology into the English Language Curriculum

Technological Pedagogical Content Knowledge (TPACK) is known as a framework to integrate technology into educational programmes in an effective way for teachers to be aware of three major knowledge types: technological, pedagogical, and content knowledge. A significant part of the technological stance of *the English Language Curriculum* has been designed around the three pillars of this framework: helping teachers recognise what they already know about the language (grammar, vocabulary, phonological aspects, etc.); recognising how much they know about how to facilitate learners' learning (lesson planning, techniques, etc.) and how they can use educational technologies and tools (AI based tools, Internet platforms, etc.); to expand learners' engagement, and deepen their understanding. The conscious use of technology to improve learning-teaching experiences and practices are supported in this way through several apps for designing materials such as digital stories, summaries, picture strip stories, documentaries, songs, poems and so on

9983237 4 - 2899832374 - 2899832374 - 2899832

throughout the themes.

"Blended Learning" has been taken as the second conceptual and theoretical framework for the use of technology in *the English Language Curriculum* since it combines up-to-date online and face-to-face teaching methods with technological tools, media, and techniques. In terms of the amount of technology and the types of techniques, ways, and means of the technology integration into the learning- teaching process in all years. In *the English Language Curriculum*, the use of technology refers to the integration of technology into the materials, teaching and learning process of lessons inside and outside the classroom for facilitating, enriching, and expanding learning, using and communicating in English. Theoretically, it is derived from "Active Learning" which aims to use the technology to help learners think and learn more deeply by facilitating their learning process in an enjoyable way, in appropriate contexts through technological means by using real, natural, and authentic language.

Incorporating the Cultural and Moral Foundations of the Century of Türkiye Education Model into the English Language Curriculum

In line with the Century of Türkiye Education Model, *the English Language Curriculum* gives importance to enabling students to develop sensitivity towards national and spiritual values and to recognise their own cultural identities. These aspects have been given particular attention in the curriculum. In designing the sub-themes and the contexts within these themes, care has been taken to ensure that the content aligns with students' cultural identities and these core values. To this end, the programme incorporates activities related to sports, arts, literature along with moral values and traditions, national and religious days, celebrations, and events.

This approach aims to both strengthen students' connection with their own national, cultural, and global worlds and enable them to express their national and cultural elements while learning English. In this way, *the English Language Curriculum* demonstrates consistency with the national, cultural, and pedagogical framework of the Century of Türkiye Education Curriculum model. In this line, some examples to the national, religious, traditional and cultural celebrations and days are presented below.

National Celebrations and Important Days
18 March Çanakkale Victory and Martyrs' Day
23 April National Sovereignty and Children's Day
19 May The Commemoration of Atatürk, Youth and Sports Day
15 July Democracy and National Unity Day
30 August Victory Day
29 October Republic Day
10 November Atatürk Memorial Day
24 November Teachers' Day

Philosophical, Theoretical, and Methodological Stance of the English Language Curriculum

Philosophical Approach to Learning and Teaching

In *the English Language Curriculum*, the philosophical background does not refer to a background that defines foreign language education as the transfer of structures to the student, but to a background that aims at the individual, cultural and social perception, formation and development of the learner. In *the English Language Curriculum*, as in any field of education, the teaching of English as a foreign language is based on a number of philosophical approaches. This foundation includes the basic principles that reveal the goals, nature, organisation, and teaching processes of foreign language education. The theoretical approaches of applied linguistics, which establish the theoretical framework of teaching English as a foreign language, are also positioned on this philosophical background. In addition, the design, implementation, and evaluation of the curriculum are also shaped on this background.

The components of the philosophical foundation of *the English Language Curriculum* can be considered as "the aims and objectives of learning English", "the process of learning English".

a) The Aims and Objectives of Learning English

Individual formation and development goals that describe English language learning as a phenomenon contributes to cognitive, emotional and spiritual development and supports individual development not only for communication but also as a means of thinking and perceiving.

2899832374 - 2899832374 - 2899832374

Cultural goals and objectives that describe the phenomenon of English language learning as contributing to learners' awareness of and respect for their own culture, awareness of the existence of other cultures in the world, and understanding and respect for people from their and other cultures.

Social aims which recognise that learning English is about first expressing oneself effectively and accurately, then understanding other people accurately and communicating effectively with them in contexts such as school, family, neighbourhood, country, the world and so on.

b) The Process of Learning English

In *the English Language Curriculum*, the process of learning English refers to individual formation, growth, and development. The process dimension is reflected in the English Language Curriculum through various "Applied Linguistics" approaches. This theoretical background has been synthesised in the teaching of English as a foreign language in all English classes and themes **of the programme,** and this synthesised theoretical background has formed the background and framework for defining the content and implementation of the English Language Curriculum.

Action-Oriented Approach to Foreign Language Learning-Teaching Process in the English Language Curriculum

One of the major principles of the Action-Oriented Approach (AOA) is described as enabling learners to perform for succeeding in communication in real-life socio-cultural contexts as stated in the 2020 version of the CEFR Handbook. Learners' involvement in the learning process and their awareness on the social nature and use of language learning is of great importance in AOA. Learners are expected to be aware of their own individual learning and also of the relationship between the consequences of their personal learning and the social life. These principles are in harmony with the academic stance of *the English Language Curriculum* which is based on these autonomous, purposeful, communicative, and collaborative learning in socio-cultural contexts in and out of the school. These characteristics of *the English Language Curriculum* direct the attention from the language itself to "how to learn and how to use it" perspective in the AOA as stated in the CEFR. Linguistic elements are the means of English language learning to be able to use them autonomously and collaboratively with peers and other people in social and cultural contexts. In *the English Language Curriculum*, the aim for learners is to interact and communicate successfully, but then to transfer their knowledge and skills as successful communicators contributing to their own development, to their own society in which they live in and also to the whole world through English as their foreign language, wherever the use of English language is needed.

To bring these ideas to life, each sub-theme of the main theme in *the English Language Curriculum* is used to build up a micro socio-cultural context with all possible real-life situations through relevant materials and bring them into the classroom. Learners first learn what these concepts in the sub-themes are about with the help of linguistics elements such as words, phrases, sentences, use of grammatical items and so on. Then they understand and learn how these linguistic elements function in creating semantic meanings in English. They learn how to use them in communicating with other people to express their own understandings through their knowledge, thoughts, ideas, and feelings, and then to understand the perspective of other people in English. Ultimately, the aim of *the English Language Curriculum* for learners is to transform their communicative competence, capacity, and ability to be good communicators and contributors in their community, in different (multilingual) societies, and in the world to make it a better place.

In *the English Language Curriculum*, this transformation is processed through several communicative activities, tasks, projects, assignments, and performances throughout the themes. Learners work on many activities and tasks to learn how to interact and communicate, then they transfer this knowledge and skills to where they work both individually and collaboratively on real-life topics and socio-cultural contexts of each theme of *the English Language Curriculum* to access issues, challenges, problems and their remedies about the facts and situations in their immediate or distant environment.

2899832374 - 2899832374 - 2899832374

Post-Method Approach

The English Language Curriculum does not rely on and adhere to a single language teaching method but synthesises various English language teaching approaches, methods defined and described by different approaches and theories, combining them by selecting and using appropriate techniques from them in a meaningful way. This combination has been designed in line with the basic objectives in all years of *the English Language Curriculum*. The aim of this combination is to facilitate learners' learning processes so that they can develop their basic language skills, gain communicative competence and use English effectively, naturally, and competently in real and natural life contexts. This synthesis has been adopted in *the English Language Curriculum* and explains the methodological stance of it.

This stance in *the English Language Curriculum*, is not based on a specific and single teaching method; it defines and describes the selection of the appropriate and suitable techniques and activities for the appropriate and suitable learner, place, time, context, situation and purpose, with an emphasis on factors affecting language acquisition and learning, such as learners' age, learning styles, motivation levels, aptitudes, and personality traits, as described in the Post-Method Era Approach to teaching languages.

In the "Post-Method Era" perspective of the programme, various up-to-date and traditional methods such as "the Action-Oriented Method of CEFR", "the Communicative Method", "Blended Learning", "Flipped Classroom", "Situated Learning", "Digital-Artificial Intelligence Supported Learning", "Contextual and Authentic Learning", "Social Learning", "Collaborative Learning", "Learning Through Drama", "Task-Based Language Learning Design", "Total Physical Response", "Community-Language Learning", "Multiple Intelligence Theory", and "Suggestopedia", are considered as part of the approach. "Field skills", "learning outcomes" and "learning-teaching experiences" sections in *the English Language Curriculum* have been organised in accordance with this methodological background. The practical implementation of *the English Language Curriculum* is planned according to this theoretical and academic stance by taking learners' ages; cognitive, emotional, physical, social, cultural aspects; learning styles; and interests into account.

Socio-Cultural Approach and the Communicative Approach

In the design and formation of *the English Language Curriculum*, one of the basic foundations is the "Socio-Cultural Approach" which posits that language acquires meaning within social and cultural contexts, and that language learning enables individuals to interact with different cultures while maintaining their own cultural identity. This approach is based on the interaction between language and culture and fosters intercultural understanding. This approach has been proposed and developed by many applied linguists and has been adopted as one of the central conceptual and theoretical foundations of foreign language education.

English can make important contributions to both individuals and societies in terms of their personal development, access to information, various personal, educational, professional and business opportunities, their ability to understand and convey cultural differences, and participation in universal communication. Today, it is widely used as a global means of communication among individuals and societies in a number of fields such as education, science, the arts, technology, business, media, and diplomacy.

Through different forms and varieties of English, it can enable speaking communities by articulating speaking communities to express their own identities and can allow different individual and local voices to be heard in global communication contexts rather than dominating with its culture and nativeness through it changing role in the world. In creating themes and course contents of *the English Language Curriculum*, the "Socio-Cultural Approach" has been adopted as part of the conceptual and theoretical framework, emphasising that English can serve as a common means for people to express their social and cultural voices.

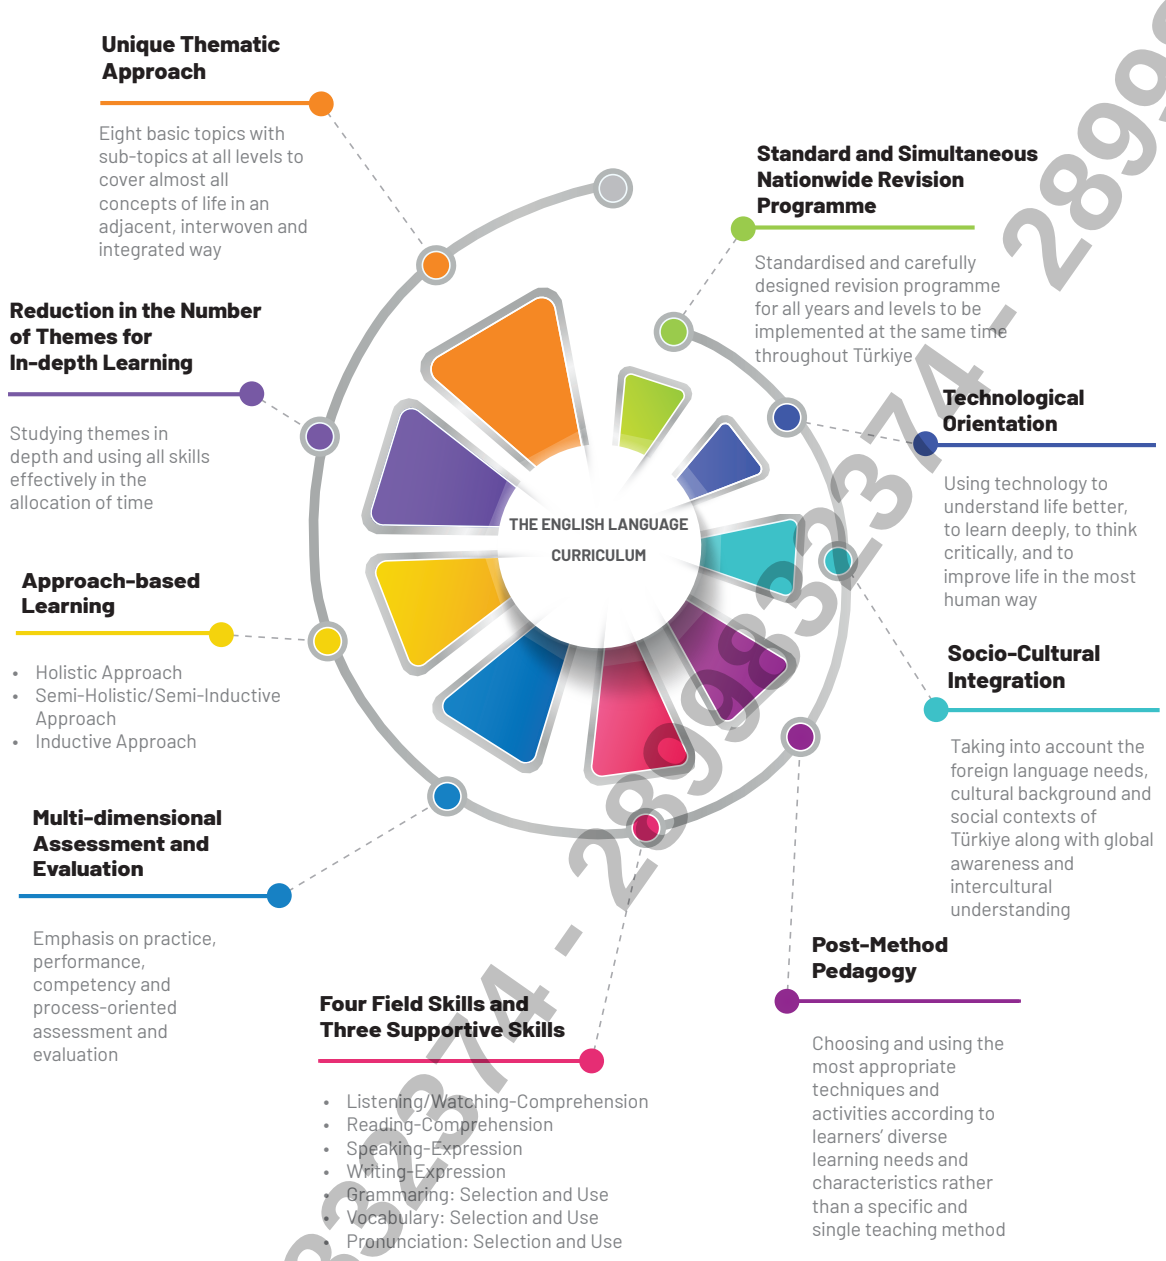

Approaches to Learning and Teaching in the English Language Curriculum

The English Language Curriculum is based on the General Aims of Turkish National Education and the Basic Principles of Turkish National Education as expressed in Article 2 of the National Education Basic Law No. 1739. In this curriculum, students are seen as "active participants", "active observers", "responsible learners", "discoverers", "context members", "communicators", "explorers", "problem solvers", "members of learning communities", "receivers and providers of feedback", "reflectors of thoughts and emotions", "innovative

practitioners and producers", "competent language users", "co-facilitators" and "social agents". Within this scope, the objectives concerning students are as follows::

1) They are expected to:
   a) recognise, perceive, identify, understand, and interpret oral/verbal (auditory) and written (visual) content, which contains the language with target language structures, vocabulary and social language correctly and efficiently.
   b) apply this knowledge and related skills to their own lives and use it effectively in oral/verbal or written communication in English
   c) use this knowledge and related skills to understand social and cultural differences to communicate with other people effectively in English.
2) They are expected to find remedies for the problems and issues in the content by recognising, perceiving, and making sense of the functions of the language with the target language structures, words and social language that they are learning, and to express these remedies.
3) In case of a language communication problem with others, they are expected to share the solution with a content that includes the language with the target language structures, words and social language functioning well and can contribute to healthy communication.
4) They are expected to understand and respect the content including rules, principles, situations, thoughts, feelings, and values of other cultures.
5) In situations that require provision of information and/or discussion of content, they are expected to be able to convey this information in a language that includes target language structures, words and social language in a form that they function accurately, and others perceive and understand it.
6) When discussing ideas and opinions, they are expected to justify their ideas and opinions in a consistent and valid way in communication with others by using understandable, accurate and appropriate English.
7) They are expected to use the content in English automatically, authentically, naturally and appropriately in the necessary and appropriate contexts at school and in their personal and social lives outside school.
8) They are expected to have a holistic perspective in understanding different information, emotions, thoughts and justifications with the help of language skills, the accumulation of knowledge, thoughts, and opinions they have gained as a result of understanding, perceiving, analysing, synthesising and evaluating the content, and to reflect this perspective in communicative exchanges and discussions they have with others in English.
9) They are expected to acquire social-emotional skills, literacy skills, higher-order thinking skills and values by integrating them with English language learning skills.
10) They are expected to use all the language skills and other skills integrated with English language skills that they have acquired to improve and develop their own and others' living conditions; to use them for the benefit and development of their country; to use them to develop living conditions in the world and in nature; to play an active role in designing and shaping the future by using these skills to develop innovative and creative ideas.

9983237 4 - 2899832374 - 2899832374 - 2899832374

Infographic: The English Language Curriculum

1.2. PRINCIPLES FOR THE IMPLEMENTATION OF THE ENGLISH LANGUAGE CURRICULUM

- *The English Language Curriculum* has been structured in alignment with the "Common Document of the Century of Türkiye Education Model". This document should be taken into consideration in planning English lessons; designing and preparing course materials; planning assessment and evaluation processes (both for formal and alternative and process-based assessment and evaluation), designing and preparing assessment and evaluation materials; designing and preparing the contents of coursebooks and other supplementary teaching materials. All educational activities should be planned and carried out to ensure that the learner profile in the Common Document of the Century of Türkiye Education Model is achieved.
- As *the English Language Curriculum* will be implemented gradually, the deficiencies and problems in the prior learning processes related to the existing level in English should be determined by the teachers in English departments of the schools. The content to address these deficiencies and problems should be determined in the departmental meetings at the beginning of the academic year and should be implemented throughout the educational process. There is a revision programme in *the English Language Curriculum* for each year (grade), to be implemented simultaneously throughout Türkiye. This

revision programme consists of the content of the previous level for each new level and/or year (grade). There will be two or four revision themes according to the type of the programme before the first theme of the syllabus prepared for each level and/or year (grade) which will take place in the teaching materials. In this way, learners can both remember the content of the previous level and also can be prepared for the themes of the new level. The revision programmes of English lessons for all years (grades) in Türkiye will contribute to standardisation throughout the country.

- Field skills are used as the basis for creating the learning outcomes in *the English Language Curriculum*. Process components are identified for each field skill, as well as for each learning outcome. These process components are the basic elements that provide access to the learning outcomes. Accordingly, each process component needs to be experienced by learners in the English language classroom.
- *The English Language Curriculum* is structured on "foreign language field skills and supportive skills" included in the Common Document of the Century of Türkiye Education Model.
- In *the English Language Curriculum*, activities and applications have been designed by considering most appropriate approaches, methods, and techniques according to their ages, and language levels. In line with the Post-Method Era Approach to teaching English as a foreign language, the emphasis is on selecting the accurate, appropriate, suitable, and effective techniques and activities for the right place, time, context, material, situation and purpose, according to the age and level of the learners, rather than a specific and single teaching method. Factors that affect language acquisition and learning such as the learners' age, learning styles, motivation levels, aptitudes, interests, and personality traits are given significant consideration. This strand should be considered and used in an accurate, meaningful and effective way in lesson planning and implementation. Appropriate techniques that can respond to learners' ages, learning styles, aptitudes, language levels, areas of interest, motivation levels and communication needs and also physical conditions they are in, should be considered, and necessary activities should be designed and implemented accordingly. In this way, they can be supported to acquire and develop their language competence in English. The activities based on techniques from different methods should not be designed in an aimless and ordinary way but in a way that helps learners discover their own learning purposes, ways, situations, and desires. Opportunities needed to be provided for learners to reflect on their learning in this way and to improve their own learning through their own reflection. Individual and collaborative reflection has a great importance in *the English Language Curriculum*, and has taken place as the last component of each field skill and learning outcome.
- The first of the two Receptive Skills in *the English Language Curriculum* is the "Listening/Watching-Comprehension Skill", through which an individual develops to perceive and make sense of the oral-verbal language content produced by a speaker or other source. These sources include the structural features of the language such as the accent, stress, speed, rhythm and also include content and semantic features (related to the theme) such as idioms, terms, words, phrases, clauses, sentences and social and cultural reflections in the context. Learners perceive and understand these with the help of a variety of visuals while learning English during the noticing and recognition" stages. "Reading-Comprehension Skill" is a skill that is developed to perceive and make sense of the written content (text) which is produced with the help of the text type, visual support, use of grammar, use of vocabulary, use of idiomatic language, and the use of all semantic features in this content. Similarly, reading is very important for students to 'identify, notice, and interpret' the content and semantic features (related to the theme) such as idioms, terms, words, expressions, phrases, sentences, and the social and cultural reflections in the context. The structural and semantic features of the language are of great importance for both reception and comprehension.
- "Listening/Watching-Comprehension Skill" is a real time, highly fluid and rapid process therefore requires fluid, instant reception and understanding and also rapid and meaningful response and feedback. "Reading-Comprehension", on the other hand, is a more static, controlled and slower process. In both "receptive skills", the content conveyed to the learner and learner's perception of the meaning of the message are based on her/his personal and social relationship to that content. In *the English Language Curriculum* "Listening- Comprehension and Reading-Comprehension" skills, which comprise the

reception, interpretation, and comprehension process in communication, have been organised with this factual information in mind. In the lesson planning and implementation phases of *the English Language Curriculum* activities in which these skills are used need to be carefully planned, created, and arranged with meaningful contextual designs. Learners need to be supported to use these skills in a natural, realistic, effective, efficient, and meaningful way within the context to communicate with others.

- "Speaking-Expression Skill", is one of the two "Productive Skills" defined, described, and used in *the English Language Curriculum*. "Speaking-Expression Skill" is a verbal skill that learners develop while learning a language so as to have the competence to communicate with other people by using the content that includes the target sounds, grammatical items, vocabulary, and semantic expressions of that language effectively and meaningfully. The main elements of "Speaking-Expression Skill" are planning, interaction, and communication. In speaking, the learner develops the ability to achieve social interaction and communicative competence by using proper and meaningful content appropriate to the context, situation, place and time; by producing and using the correct sounds and pronunciation; by expressing information, thoughts and feelings correctly, meaningfully, appropriately, clearly and fluently; and by transferring cultural content and messages appropriately and correctly.
- The second of the "Productive Skills", the "Writing-Expression Skill", is the learner's ability and capability to express and convey his/her own knowledge, thoughts, experiences, and feelings in a meaningful and written form by using the content which contains target grammatical items, vocabulary, various forms of self-expression, types of writing, and rules of the language. The acquisition of "Writing-Expression Skill", which focuses on transfer, expression and production, begins with the "noticing-recognition-comprehension" of relevant input in the content in *the English Language Curriculum*. The transfer and understanding of information in input is processed through the use of receptive skills such as listening, watching, and reading. The ability and skill to write, express, and explain involves many processes that require planning, implementation and rewriting (by considering the feedback given), and developing the text that allows the development of creativity. This skill is strengthened through different types of writing studies. Activities, plans, and practices in which productive skills are used in *the English Language Curriculum*, need to be carefully planned, designed, and created in a contextual and meaningful way. Learners need to be supported to develop their communicative competence by using their English "Speaking-Expression" and "Writing-Expression" skills in a natural, authentic, automatic, realistic, effective, efficient and meaningful way within the context.
- "Supportive Skills", as defined and described in *the English Language Curriculum*, are processed with all the other language skills. There is a spiral, interdependent, and reciprocal relationship between the field skills and supportive skills therefore all the skills are used in an integrated, unified, spiral, and interconnected manner. Grammatical, lexical (vocabulary) and phonological aspects of a language are most often taken as content knowledge even if their selection and use are mentioned in the relevant literature without positioning and naming them in a specific way as they are related to learners' "linguistic competence". In the recognition stage of language learning, language learners encounter, perceive and recognise grammatical items, lexical items (vocabulary) and phonological aspects (pronunciation, intonation, etc.) and are expected to begin to acquire their "linguistic competence" which will later linked to productive skills. This recognition stage is present in the processing of "Receptive Skills". It may therefore be necessary to divide the learning of grammar, vocabulary and pronunciation into two stages: recognition stage and selection-use stage. The "use" stage takes place in the processing of "Productive Skills" in language learning through the skills of "Speaking-Expression" and "Writing-Expression".
- This determination about supportive skills in *the English Language Curriculum* is not for producing new information. It is rather for positioning the information about the selection and use of grammatical, lexical, and phonological aspects as "Supportive Skills" that take place in theory and practice in a vague way and that leads to considering how to empower learners in acquiring their "pragmatic, strategic, communicative, and sociolinguistic competences".
- "Grammaring: Selection-Use Skill" is the first of the three "Supportive Skills" in *The English Language Curriculum*. It is one of the language skills that is approached in the same way as other language skills by

using the appropriate methodology and context. For Years 9-12 of upper secondary school, "inductive" learning techniques based on "conscious awareness" are used for this skill. For supporting learners to acquire the functions of this competence, appropriate, and correct activities should be selected in contexts that are natural and authentic. These activities should aim to contribute to the acquisition and development of learners' communication competence by using English grammar as naturally, correctly, authentically, and automatically as possible.

- Grammar "acquisition" is the situation in which children naturally pick up, adopt, and use the grammatical items and forms (and other elements of the language) of their mother tongue, in a realistic and natural environment and context, without conscious focus, without being aware of it, in an automatic, natural and real way. In the case of foreign language education provided at school, it is described as "language learning" (including grammar and other elements of the language). The elements that define language learning are the artificial environment, planning, conscious learning of rules and short-term goals. In *The English Language Curriculum*, teaching grammaring aims to build an environment where learners can communicate by using the language with correct grammar in a natural, realistic and meaningful way in context and on a correct and appropriate methodological basis that can make this possible in a natural, realistic, automatic, and meaningful way. This can only be achieved to a certain extent, and the necessary condition for this, is building a continuous, natural and authentic environment in the classroom where grammar is not taught as a subject by the teacher but through the use of appropriate methods, techniques, materials, and activities. For this reason, the process should be supported by a plenty of natural and realistic repetition, revision, interaction, storytelling, role-playing, and communication activities. In *The English Language Curriculum* , the grammar learning process of primary school pupils (Years 2, 3, 4) is described with the "Holistic Approach", where the functions of the right hemisphere of the brain are found to be more effective, as explained in the relevant literature, helping them see, hear, and use grammar automatically without being aware of its rules, and where features and activities such as visuals, rhythm, music, movement, drama, and storytelling are used through all aspects affecting learning (physical, cognitive, affective, cultural, and social) together. The process of learning grammar in Years 5 and 6 of lower secondary school is described as the "Semi-Holistic/Semi-Inductive Approach", using features and activities such as visuals, rhythm, music, movement, drama, and storytelling, which still allow the functions of the right hemisphere of the brain to be effective. At the same time, the functions of the left hemisphere of the brain, which provides awareness, natural and simple inferences, and very simple discoveries, are gradually activated, but there is a condition that grammar should not be taught as a subject by the teacher. Noticing and awareness activities are the most important activities of this approach and do not involve teacher explanation or conscious discovery tasks. For learners in Years 7, 8 of lower secondary school, Years 9, 10, 11, 12 and Year Prep and After Prep-Years 9, 10, 11, 12 of upper secondary school the "Inductive Approach" is described to learn grammar in a meaningful and appropriate context by discovering the rules themselves. The functions of the left hemisphere of the brain are more effective in this discovery process, by being aware of their meaning, function, usage, form, by using higher-level thinking skills such as examining, comparing and classifying, and by making inferences based on their meaning without using terminology or formulations. In this approach, the functions of the right hemisphere of the brain can still be activated through the activities such as visuals, music, movement, drama, and storytelling in the created course content. In the learning process, it is necessary to create continuous, natural, authentic, and realistic contexts and environments where grammar is not taught as a subject by the teacher in the school classroom but is facilitated to help learners use the language by selecting and using grammar with appropriate techniques and activities in these natural and realistic contexts. In *The English Language Curriculum* , activating the functions of both hemispheres of the brain as much as possible in all lessons is encouraged so all the activities need to be carefully planned, designed and created in a contextual and meaningful way in lesson planning and practice so that learners can and use English grammar in a natural, authentic, automatic, realistic, effective, efficient, and meaningful way according to the context, and thus can acquire and develop their communicative competence.

- In English Language Curriculum, one of the three "Supportive Skills", "Vocabulary: Selection-Use Skill" is based on the learner's positioning and using the target words after recognising, perceiving, and understanding them through "Receptive Skills" in the target content in a way that is appropriate for the context, situation, place and time. They also remember, recall and add previously learned vocabulary that are appropriate for the situation and context, to the context, and select and use them correctly, effectively and meaningfully. These stages have been identified, revealed and applied in the "process components" of the "field skills" and then transferred to the "learning outcomes", and finally to the "learning-teaching experiences" sections of the themes in *The English Language Curriculum*.
- "Vocabulary acquisition" is the situation in which children pick up and adopt words without noticing and analysing them in their mother tongue. "Vocabulary learning" on the other hand, is the process that takes place in the artificial environment of the classroom, not in the natural contexts and environments of second/foreign language. In order to be sure that words are used naturally, authentically, correctly, meaningfully, and effectively in learners' interaction and communication processes, it is necessary to practise them by being aware of their meaning in a way that is appropriate to the context, their form, pronunciation and uses. Activities in which this skill is used should be carefully planned, designed, and created in a contextual and meaningful way in the lesson planning and implementation process included in *The English Language Curriculum* so that learners can use English vocabulary in a natural, authentic, automatic, realistic, effective, efficient and meaningful way in context and thus gain communicative competence.
- The third of the three "Supportive Skills" in *The English Language Curriculum* is the "Pronunciation: Selection and Use Skill". Phonological skills help learners to use the sounds, accents, rhythms, tones, intonation, and pronunciation of the language correctly; to reflect the content of the speech correctly; and to interact and communicate efficiently and effectively. This skill is supported with activities through listening practice including listening exercises, repetition, imitation, pronunciation exercises, listening to peer recordings and giving individual feedback, listening to individual voice recordings and reflecting individually during automatic selection, use and reflection sessions. As with other skills, the correct and appropriate use of pronunciation facilitates learners' language learning experience by giving meaning to the content. This content should support the provided verbal information and make the content of the verbal information meaningful. In lesson planning and implementation, activities that use this skill need to be planned, designed, and built in a contextual and meaningful way where learners are expected to use English pronunciation naturally, authentically, efficiently, automatically, and meaningfully.
- *The English Language Curriculum* also aims to support learners to develop their "sociolinguistic and pragmatic competence" through communicative and collaborative activities relevant to different cultural content and contexts. The "social language expressions" used in all the themes are part of this, as learners can access the real- world language by learning them inside the classroom and using them inside or outside the classroom in their personal lives. For supporting learners to acquire "social competence" through meaningful oral/verbal and in written contexts in a way that is appropriate to their English language levels, it is necessary to provide opportunities for them to use English effectively, meaningfully correctly, naturally, authentically, realistically, and fluently in their social communication, inside and outside school. This need to be considered in the design and implementation of all course contents very carefully.
- As described in *The English Language Curriculum*, it is essential that all processes written for "learning outcomes" and "process components" need to be considered and implemented in the lessons. In addition to this, in recommended practice, lesson planning activities should be carried out counting all related and integrated programme components, especially the "learning outcomes and process components" of the relevant theme. All the applications can be differentiated accordingly.
- In the English language classroom, it is necessary to create a learning environment that encourages the active participation of learners. Similarly, a classroom climate in which personal ideas can be shared independently and the development of social and emotional skills is supported should be created.

9983274 - 2899832374 - 2899832

- Activities such as questioning, researching, observing and experimenting should be carried out with an interdisciplinary and contextual approach, based on the language level of learners in the class. They should be planned and implemented by the teachers of English departments carefully.
- In *The English Language Curriculum*, "establishing links" section has been described and designed as an important part before moving on to the "learning-teaching experiences" section of the themes. The first stage of the three-stages of "establishing links", should provide the necessary preliminary information to facilitate the processing of the theme. The second stage should summarise what needs to be done to be ready to process the "learning-teaching practices" section. In the last stage, it should be indicated how the learners can use the knowledge, experience, and skills they develop throughout the themes, or to which disciplines they can transfer them and especially in which areas they can use them in their real lives.
- The "learning-teaching experiences" section in the themes is presented in a comprehensive framework to provide learners with a holistic perspective. This holistic perspective is seen as a supportive element for learners. The section guides the teacher to use different teaching approaches, methods, techniques, and activities to facilitate learners to become aware of their own learning and individual learning strategies they can use, to achieve constant learning, to perceive their own learning process, to be aware of the spiral flow and interdisciplinary relationships in the learning process within this holistic perspective along with the social use of the language in social contexts.
- "Reflection" is a significant component of *The English Language Curriculum*. Learning-teaching experiences are organised in a way that "field and supportive skills" and "learning outcomes" gain meaning together within the course flow and facilitate learners to reflect on their learning about the activities. Both individual and collaborative reflection takes place in the flow of "learning-teaching" process as described in the "field skills" and "learning outcomes" sections.
- *The English Language Curriculum* has been prepared by taking into consideration "field skills and supportive skills", "conceptual skills", "dispositions", "inter-curricular components (social-emotional learning skills, values, literacy skills)", "inter-disciplinary relationships", "inter-skills", "content frame", "generalisations and key concepts", "indicators for learning", "learning-teaching experiences (basic acceptations, pre-evaluation process, establishing links, learning-teaching practices)", "differentiation (expansion and supporting)", and "teacher reflections". Therefore, learning outcomes should be addressed in accordance with the principles of progression, spirality, and sequentiality as specified in the themes.
- In the process and flow of "learning-teaching experiences" section, all language skills have been followed from easy to difficult, from known to unknown, from more controlled to more open-ended and communicative, according to the relevant language level. Branching learning has been attempted throughout these processes. Collaborative, interactive, and communicative activities have been suggested throughout the themes constantly. The main aim of foreign language learning, "to communicate by filling information gaps through reciprocal and mutual interaction, sharing, and exchanging ideas", has been included in the flow of "learning-teaching experiences" section by using all language skills. This flow and methodological stance should be followed in the classroom to facilitate learners' learning experiences.
- One of the principal aspects of *The English Language Curriculum* is field and supportive skills which are pursued, processed, and developed in a holistic, integrated, spiral and recycling manner within the themes. To provide and maintain this, each theme begins with a holistic introductory story, as a context for teaching and learning the language. The introductory story is planned to be a digital film with a script presenting the linguistic and semantic elements such as target grammar, vocabulary, phonological aspects (pronunciation, intonation, etc.), and social language expressions, appropriate to the language level, needed to learn the theme. The perception of the general topic of the theme is provided with the visuality and movement of the digital introductory story (film). The target grammatical structures, words, pronunciation, and social language expressions in the story are presented both visually and verbally. With the flow of language skills, this introductory story is revisited several times for grammar,

vocabulary and social language content to understand the general topic first. This rich content is used as the basic context throughout the theme. These returns/revisits involve the use of skills beginning with reception and gradually turns into production. By using all skills in an integrated and spiralling way, the learner is enabled to bring the theme into real life and use it in communication.

- *The English Language Curriculum* includes different contents that are consistent with the learning outcomes, taking into account the learners' readiness and learning styles and strategies in a way appropriate to their language levels. Written materials such as puzzles, paragraphs, reading passages, short stories, novels, poems, articles, worksheets, magazines, reviews; visual materials such as illustrated-cartoon-anime-continuous stories, posters, picture cards; preparation and verbal/audio/visual materials such as rhymes, songs, dialogues, games, simple story recitals, podcasts, documentaries, interviews, radio programmes, educational videos, story videos, short films, presentation contents, chat groups, simulations, animations, etc. have been suggested as sources for learning experiences. While preparing such learning-teaching materials, cooperation and collaboration should be provided by department teachers and other branch teachers.
- After the introduction of each theme is provided with a contextual and introductory digital introductory story (film), the flow of all the language skills are given a place in an integrated way. There is a unified design in the "Speaking-Expression" skill to accompany other skills throughout the theme. "Grammaring: Selection-Use, Vocabulary: Selection-Use, Pronunciation: Selection-Use" skills are used and practised with the "gamification" techniques and aimed to be used effectively in communication. The impact of such practice activities on learning should be taken into consideration.
- In *The English Language Curriculum*, the reading skill is of great importance because reading texts create a written context providing input and providing reception of the language. In primary school classes, group, vocal and fun "pyramid reading" and "radio reading" techniques, which are also used for pronunciation are preferred. In secondary school, "silent jigsaw reading" techniques, which are especially useful and effective for crowded classes are suggested. It should not be forgotten that reading should be vocal for pronunciation and silent for meaning. It should also be remembered that aloud reading in turns serves neither purpose and wastes time. Reading skills in *The English Language Curriculum* are studied through reading sections that include the written version of the digital introductory story and also various other reading passages.
- "Content and Language Integrated Learning (CLIL)" is one of the methodological components of English Language Curriculum. In CLIL, English is taught through other disciplines. The main aim is to teach both the content and the language together in a simultaneous way. Culture is also an important part of CLIL. Local, target, and international cultures can be learned through several contents by integrating them into CLIL activities. All language skills are proposed to be used for "CLIL" in *The English Language Curriculum*. Information processing, problem solving, researching, collaboration, critical thinking, and discussion techniques need to be used while working in CLIL. It must be seen as an important means of learning about one's own and other people's cultures, developing awareness of them; seeing new contextual uses of English created with other disciplines, and understanding and explaining content related to other cultures and disciplines in English.
- Consolidation is a significant process in English Language Curriculum. Content covering all grammatical items, target vocabulary, and social language is consolidated on a regular basis through enjoyable and meaningful activities. Ongoing cartoon-anime-picture-photo strip stories with resident characters are suggested to consolidate the content of the themes in a vivid context. All language skills are used to consolidate the content and to provide communication by producing new contents and contexts while revising the knowledge and skills acquired and remembered.
- "Performance Assignments" are also important part of English Language Curriculum, which are based on searching (research), constructing (creating), and presenting real-life productions and remedies several issues. As part of the "Action-Oriented Approach, the Communicative Approach and Task-Based Approach" to teaching and learning, they are processed with versatile activities such as drama, narration, role-play, presentation, gamification, etc. in English Language Curriculum to support learner

autonomy, "differentiated learning", and collaborative learning. They are used in order to reconstruct the content covering the language including all the target language items, grammar, vocabulary, and social language expressions. In each theme there are many tasks also there is a performance assignment in which students can apply and expand what they have learnt in the theme collaboratively in a new context to strengthen their "productive and supportive skills". Learners prepare performance assignments to remember, revise, consolidate, use, and produce new and meaningful contexts for all theme contents according to their language levels. Digital means and tools are also recommended to be used in the production of written and visual content with the guidance of the teacher. It is very important that these performance assignments which should be original, creative, versatile, meaningful, revisional, and consolidating should also reflect the perspectives of the learners about learning. The teacher's and peers' feedback and individual and collaborative reflection are very significant part of the performance assignments in *The English Language Curriculum*.

- In *The English Language Curriculum* "values" are presented according to the target content in the theme, the process of learning-teaching experiences, and learning outcomes. Learners are expected to internalise these values and reflect them in their daily lives. For this, learners needed to be provided with the opportunity to apply the value they realise during the process of examining and understanding the content in the activities in the themes.
- In the studies conducted in *The English Language Curriculum* or in the products such as projects, portfolios, poems, songs, articles, stories, reviews, etc., attention should be paid to issues related to copyright and protection of personal data. Content should be created that complies with the constitution and laws, considers the sensitivities of individuals or society, reflects national and moral values, and respects the rights and freedoms of individuals. Learners should be made aware of their legal rights and responsibilities when creating and sharing content.
- In *The English Language Curriculum*, the activities included in the expansion and supporting sections in the "differentiation" section do not take place in teaching materials. However, some e-contents are prepared by the material developers for the implementation of their contents. All practices and activities within the scope of differentiation should be planned and implemented by teachers, taking into account the interests, needs, and requests of the learners.
- It is important to include reading texts that broaden students' horizons, inspire and encourage them, and reflect Türkiye's achievements to date, its internationally renowned works, its visibility, vision, and recent successes, as well as texts, including digital content, that explain the significant and unique contributions of our country's institutions and people in *The English Language Curriculum*. It is essential that the selected reading texts align with national, spiritual, cultural, and moral values of our country. Reading materials should be chosen to support the idea that students learn about the values of our history, culture, and civilisation accurately.
- In *The English Language Curriculum*, the aims, objectives, methods, criteria and tools of assessment/evaluation based on the learners' English levels have been included as an essential part. An alternative assessment/evaluation scheme has been designed to assess/evaluate English-related knowledge and skills in creating new meaningful content and communicating through it. The components of *The English Language Curriculum* have been made a meaningful part of learning and evaluation. Instead of assessing/evaluating "values, dispositions, literacy skills and social-emotional learning skills" with marks and scores, some alternative evaluation tools including classroom-based and/or out-of-classroom activities such as performance tasks, portfolios, projects, diaries, interviews, drama studies, etc. have been used to evaluate their development together. These components are also among the criteria taken into consideration in the evaluation tools and marking/scoring keys of such performances and achievements. These alternative evaluation techniques have been included in *The English Language Curriculum* to evaluate language skills, collaborative activities such as pair and group work, and creative, productive, and communicative activities according to language levels. The evaluation criteria for each skill are listed as "purposes, indicators, application, frequency of use, evaluation tools, and evaluation focus" and are defined and described according to learners' language level. This list is provided in the entry

section of *The English Language Curriculum*. It is not compulsory to assess/ evaluate every skill in every lesson. Teachers can choose any of the assessment/evaluation tools for the skills on the assessment/ evaluation list according to the needs and learning outcomes of the theme. In school practice, these forms of assessment/evaluation should be varied according to language levels, dispositions, abilities, needs, and special situations of the learners and the context. The measurement and evaluation of performance development, which include knowledge and skills, should contain activities about situations, problems, and solutions that are interesting, related to everyday life. These activities should also be about situations, problems, and solutions that can be encountered in distant or close environments when using English in communication with others. Performance and proficiency in the use of the language should be assessed/evaluated according to these criteria. Learners should be provided with feedback on the linguistic, cultural, and social formation of their performance which is non-judgemental, motivational, supportive, and facilitative of their learning. Throughout the whole assessment/evaluation process, digital technologies can be used to make the applications and implementation more practical and functional.

- Alternative assessment and evaluation techniques and activities for the upper secondary classes are given below. There are different assessment and evaluation applications for each language skill. Teachers do not have to use all of the items in every lesson. They can be selected and used according to the needs and flow of the lesson.

    1. **Evaluating listening/watching and comprehension: Objective:** To listen/watch efficiently for comprehension to be able to engage in spoken language from people or technology-based digital audio-visual materials to develop critical thinking skills by using various strategies and techniques such as listening for gist, listening for scanning, dictation, listening and note taking, collaborative discussions and so on. **Indicators:** Accurate understanding of the spoken content, responses to closed, semi-closed or open-ended questions in comprehension activities, successful participation and turn taking in various listening activities. **Frequency:** At least once in a month, on a regular basis. **Evaluation tools:** An observation checklist and/or observation grids for monthly monitoring sessions. **Evaluation/Assessment focus:** Evaluation is based on effective comprehension, inference skills, understanding of the main idea, attention to details, interpretation skills and successful engagement in communication by encoding and decoding the messages accurately and meaningfully.
    2. **Evaluating the use of pronunciation: Objective:** To pronounce the target sounds, words, and phrases accurately and appropriately in context. **Indicators:** Clarity in articulation of target sounds, and phrases, appropriate and correct intonation and stress patterns and improvement in pronunciation over time. **Frequency:** Regularly, once in a month. **Evaluation tools:** An observation checklist and/or observation grids for monthly monitoring sessions. **Evaluation/Assessment focus:** Evaluation is based on accurate pronunciation of words, phrases and sentences, accurate use of intonation and stress patterns when speaking to/with others in the communication process, by using a checklist with descriptors such as "clear", "moderate", "needs to improve" and by giving oral feedback or through written notes for observation and monitoring sessions.
    3. **Evaluating the use of the target vocabulary: Objective:** To select and use the target vocabulary accurately, meaningfully, and communicatively in context. **Indicators:** Accurate word choice, accurate and appropriate use of word types such as antonyms, synonyms, and word forms, integration of vocabulary in speaking and writing tasks accurately and appropriately in context. **Frequency:** During or after observation and monitoring on a regular basis, every two months. **Evaluation/Assessment tools:** A checklist, a rating scale, and/or rubrics. **Evaluation/Assessment focus:** Evaluation is based on the performance in using the target vocabulary in collaborative and communicative activities such as role play, dialogues, discussions, debates, presentations or individual activities such as writing paragraphs, stories, poems, summaries, fact files and taking part in vocabulary jigsaws, etc.

9983237 4 - 2899832374 - 2899832374 - 2899832

4. **Evaluating vocabulary recording: Objective:** To create personalised paper or digital dictionaries with word-related information, including definitions, antonyms, synonyms, word structure, etc. about the target vocabulary in context. **Indicators:** Regular entries with accurate definitions, antonyms, synonyms, relevance to the target content, organisation, meaningful content, continuity and order. **Frequency:** Every two months on a regular basis. **Evaluation/Assessment tools:** Oral and/or written feedback and a rubric scheme given to students in advance. **Evaluation/Assessment focus:** Evaluation is based on the categories such as accuracy, creativity, effort, completeness and organisation of the entries/submissions.
5. **Evaluating the use of target grammar: Objective:** Selecting and using the target grammar accurately and meaningfully in context. **Indicators:** Accurate and meaningful sentence structures in speaking and writing tasks, accurate and meaningful use of grammar in communicative activities. **Frequency:** During and after observation and monitoring on a regular basis. **Evaluation/Assessment tools:** A checklist, rating scale, and/or rubrics. **Evaluation/Assessment focus:** Evaluation is based on categories and criteria created in evaluation tools as in the following examples: An example of a checklist could be as follows: a) Sentences are complete: YES /NO. b) Word order is logical and clear: Yes/No, etc. An example of a rating scale with a 1-5 Likert scale could be as follows: (1) Errors interfere with meaning (2) Frequent errors, meaning is unclear (3) Errors are noticeable but do not interfere with meaning, (4) Minor errors, meaning is clear (5) Almost no errors. (An example grammar rubric table might include the following criteria and scores: 5 criteria could be used: accuracy, variety, consistency, structural control, appropriateness in the rubrics. They can be scored on 4 levels: (1) poor, (2) needs improvement, (3) good, (4) excellent. For instance, there may be items such as (1) inconsistent use of grammar, (2) inconsistencies distract from clarity, (3) few inconsistencies in grammar use, (4) grammar is consistent throughout the task).
6. **Evaluating reading and comprehension skills: Objective:** To read efficiently for comprehension by using various strategies such as reading aloud, speed reading, silent reading, and jigsaw reading. **Indicators:** Accurate understanding of texts and context, successful participation in various reading activities, responses to closed (display), semi-closed and open-ended questions in comprehension activities, increasing performance in paraphrasing, summarising, interpreting, deducing and critical thinking skills. **Frequency:** At least once in a month, on a regular basis. **Evaluation/Assessment tools:** An observation checklist and/monitoring grids, a rating scale, and/or rubrics, closed, semi-closed and open-ended/communicative asking-answering exercises and activities, paraphrasing, summarising and deducing sessions. **Evaluation/Assessment focus:** Evaluation will be based on reading fluency, effective comprehension, ability/capability to infer meaning from the text, to interpret text, and to generate critical thinking from the text.
7. **Evaluating speaking skills: Objective:** To talk or give oral presentations on the current content by using meaningful and appropriate language in context. **Indicators:** Effective use of relevant and appropriate target vocabulary, pronunciation and target grammar; fluency; clear organisation; rapport with the audience and delivery. **Frequency:** During observation of presentation sessions. **Evaluation/Assessment tools:** Rubrics, a rating scale, and/or a checklist for observation and monitoring. **Evaluation/Assessment focus:** Evaluation will be based on fluency, coherence, accurate and meaningful use of language with target vocabulary, pronunciation, and grammar in context, audience engagement and successful participation in communication by encoding and decoding the messages accurately and meaningfully.
8. **Evaluating participation and engagement in dialogues: Objectives:** To take turns in dialogues meaningfully and efficiently by using relevant and appropriate target vocabulary and grammar in context. **Indicators:** Proper and accurate use of language with target vocabulary and grammar in context, effective turn-taking, engagement and participation in teacher-student and student-peer dialogues, correct and meaningful responses, clear explanations, engaging in effective and meaningful communication. **Frequency:** Regularly, during classroom activities. **Evaluation/ Assessment tools:** An observation checklist and/or rubrics for observation and monitoring.

Evaluation/Assessment focus: Evaluation is based on observed and monitored pair work interactions, collaboration, content relevance, accurate and meaningful use of language with target vocabulary, pronunciation, and grammar in context and successful engagement in communication process by encoding and decoding the messages accurately and meaningfully.

9. **Evaluating participation and engagement in group work: Objective:** To collaborate and participate group work activities meaningfully and efficiently by using relevant and appropriate target vocabulary, pronunciation, and grammar in context. **Indicators:** Effective performance of roles, participation, contribution to group outcomes, efficient and effectively and meaningfully. **Frequency:** Monthly during and after observation and monitoring sessions. **Evaluation/Assessment tools:** An observation checklist, a rating scale, and/or rubrics. **Evaluation/Assessment focus:** Evaluation is based on collaboration, content relevance, accurate and meaningful use of language with target vocabulary, pronunciation, and grammar in context, and successful engagement in communication process by encoding and decoding the messages accurately and meaningfully.
10. **Evaluating participation and engagement in drama work: Objectives:** To present, engage in and participate in drama activities such as pantomime stories, role plays, plays and presentations by using effective and meaningful language with target vocabulary and/or the target grammar through acting. **Indicators:** Engagement, creativity, rapport with the audience, accurate and meaningful use of language with target vocabulary, pronunciation, and grammar in context. **Frequency:** Monthly during and after observation and monitoring sessions. **Evaluation/Assessment tools:** Rubrics, a rating scale, and/ or a checklist. **Evaluation/Assessment focus:** Evaluation is based on collaboration, content relevance, accurate and meaningful use of language with target vocabulary, pronunciation, and grammar in context, presentation skills, successful engagement in communication process by encoding and decoding the messages accurately and meaningfully.
